BLACK HORSE CAMP COMING TO FRONT

Famous Old Mining District Getting Ready to Eclipse Past Records.

CUSTOM MILL HAS ENCOURAGED LEASERS

Swing.

Now that Boston capital is creeting a custom milling plant in the heart of the old-new Black Horse mining district of White Pine county, Nevada, leasing operations have been greatly stimulated, and during the coming summer months Black Horse is going to be one of the busiest and most achieving camps in the Sagebrush state. 'Located ninety-five miles from Frisco, and fifty miles from Ely, the camp has suffered from expensive irrughtage to far extent that shipments have been almost impossible. With a custom mill at hand as there will be this summer, nothing better than a railroad now is nemanded by those interested there.

There are innumerable properties being developed in the Black Horse country at present, and to mention one only would be an injustice to all. But as a matter of current news, A. G. Burtt, who is extensively interested in that camp, received word on Wednesday that Flmore and Smithson have taken a lease on the Greenherz property, and are ceiting into some extremely rich

lease on the Greenbern property, and are getting into some extremely rich gold rock. Mr. Buritt is heavily in-terested in the College. terested in the O'Hana property among others, and he states that the owners during the summer will be down to a solid working basis both in quartz and

The Black Horse district is one of the oldrime sections of Nevada with its record production of millions of dol-lars in the yellow metal. Like all the old camps, only a superficial amount of

lars in the yellow metal. Like all the old camps, only a superficial amount of work was, done, and a tremendous amount of gold in pincer diggings and in ledges remains for the modern day operator. The camp is abandantly supplied with every possible natural advantage for mixing and milling on a big scale, and work will be down to that basis in a very short time.

Through the district runs the old California trail, along which the early emigrant slowly toiled his weary way towards the coast. A few stooped along the Saske range to mine for gold, but the majority continued on. The gateway in the range was known as the Sacramento pass, which was filled with scrubby timber and projecting ledges, presenting about as ideal a pace for an Indian ambuscade as the noble reducan ever know. Mr. Baritt's properly is close to this pass, and he stated vesterday that he has found numerous skeletons of Indians lying where the buillets of the pioneers found and left them. On one occasion a well-preserved skeleton of an Indian with a portion of his blanket was found, and this was given as Christianlike a bursal as possible under the circumstances. Nearly every rock, therefore, has a history in Sacramento pass.

QUICKSHLVER MINES IN VERY URGENT DEMAND

Those who know say that demands from the east right now are for quicksilver mines, and any kind of a likely looking climatoar prospect is certain to receive a hearty hearing on application to the right spot. The demand from foreign contricts for quicksilver is increasing, and the price is going up rapidly. Since the Sacramento company of Mercur exhausted its supply of climator to the extent of making production too expensive for profit. Itah has not been a producer of this influent. There are some lively looking propositions now being developed in Humboldt county. Nevada, and occasionally one, hears of an Idaho property that looks like it would make good. California is the chief source of quicksilver in this country but the supply is not equal to the demand. Here is a chance for truth to assert herself. Those who know may that demands from

Stock Letter.

Stock Letter.

James A. Pollock & Co., bankers and brokers, 6 West Second South street, furnish the following, received over their private wire yesterday afternoon.

Dick Bros. Stock Letter—New York—Today's stock market, after a somewhat lower opening, showed some irregularity in the leading stocks. From time to time there were attempts made by traders to force prices down, but these met with only moderate success and on the decilors. There was little stock offered, and short periods of dullness would ensure in the last half hour prices recovered sharply, with Resading a strong leature in the advance. A number of specialities scored substantial gains, sotably blocking Coal and American Cotton Oil, Vienda Chemical and Goold stocks. Rock Island, preferred should also advance to a higher level. We continue to think that many of these will continue to higher level. We continue to this stock will ultimately sell close to 100.

Hetton & Co.'s Stock Letter—New York—The stock market today was in-

believe the stock will ultimately sell close to 100.
Hetton & Co.'s Stock Letter—New Verk—The ploch market today was influenced soder by the Turkish difficulty deroal and foreign markets equally influenced American stocks were sold lore from Lendon, which helped to depose values consenial, inside interests very unwilling to do anything except to give support in their specialities. We dealt if the Turkish political matter process of sufficient consequence, other than to stay speculation temporarily.

Metal Market.

The metal quotations for Wednesday, posted by McCornick & Co., were as fol-lows. Silver, 51tc; lead, \$4.10, copper,

GOLDFIELD OUTPUT IS AT RECORD LEVEL

Last Week Nearly Million Dollars Taken Out of the Mines.

Special to The Tribune, GOLDFIELD, Nev., April 14.—For the week ending last Sanday, the mines of the Goldfield district produced 6900 tons of ore, valued at \$811,000; that s, that much ore was sent to the mills Placer and Quartz Mining Will and smelters, and does not include stuff on the ground. The two mills of the Consolidated treated alone 4200 tons of \$60 rock, worth \$252,000, while the Florence mill handled 900 tons of \$30 rock. The Combination Fraction shipped 550 tons of \$40 ore, while t Western Ore Purchasing and the ? vada Goldfield Reduction works co pleted the total. For the sake of arg ment, if this total should be mu tained, it would mean \$31,000,000 i the balance of the year, or \$42,000,0 for the entire year. This more th equals the combined product of the t equals the combined product of the two leading gold producing states of the union for the veer 1907, and show what little Goldfield can do when she gets into her proper stride. The production for the week now closing with not be far from that of last week, per laps a little less, as the Consolidate people did not ship from the famous stope on the Combination claim. Ship ments of this high grade will be resumed, however, before many days.

The annual report of the Florent Goldfield teems with information of interest to the stockholders. The state

terest to the stockholders. The stat ment says that the company's clu-source of revenue for the year has be-royalties on ore produced by lesses and that at the time of the report on and that at the time of the report out eight were actually working on the company's ground. The income for the year was \$515,874, and the expense \$\$1.463. Then there is a credit to profit and loss for the period May (1905, to December 31, 1907, of \$193.761, making a total of about \$628,000 During the year the company spent of its mill and water plant \$277,588, an \$20,000 on buildings and fixtures. I 1908 there were four dividends of \$105,000 cach making a total of \$420. \$105,000 cach, making a total of \$420

\$105,000 each, making a total of \$420,000.

One of the interesting development of the week was the discovery of terfect of ore on the Lucky Boy claim of the Jumbo, belonging to the Consolidated company. All the shoots south ward from the company's workings of the Red Top broke or bent just before entering the Lucky Boy ground, but Manager MacKenzie followed one like by looking vein, and, when it broke or him, he kept on due south for about iffly feet, all the time in quartz, but without a pound of values. At the end of the fifty feet the shoot was again picked up and was ten feet at the start Since then it has widened considerably and bears every indication of continuing south into the territory worked months ago by the Mohawk-Jumbo people, who extracted a fortune within a few months. The one formation is almost precisely the same as that in the Combination stope, and may be the same body. Should this prove to be the case, an immease area of minera will be available on ground that his been practically untonched. The Lucky Boy is barely scratched. The Consolidated owns 28.41 per cent of the Jumbo stock.

The Consolidated, by the way. The Cons

solidated owns 98.41 per cent of the Jumbo stock.

The Consolidated, by the way, shipped out \$200,000 in bullion during three days this week. The official is port of the big merger, which will be issued within a few days, will show that during January the two mills treated 11,336 tons of ore; net mill returns, \$265,561,40; average value, \$26.29; average total recovery, \$9.11 per cent. For February, the two mills treated 15,258 tons; net mill returns, \$548,380,17; average value, \$41.18; average total recovery, 90 per cent. For March, the two mills treated 19, 010 tons; net mill returns, \$838,020; average value, \$50; average total recovery, 91 per cent; production for the same month, 341 tons from Combination, valued at \$236,000.

Active work is to resume on the 10.

Active work is to resume on the Active work is to resume on the Nancy Donaldson group, on the Red Mountain belt in the eastern part of this district. J. C. McCormack says that a shaft will go down at once and the country thoroughly explored. Sur-face prospecting has shown several likely value. likely veins

likely veins.

The Round Mountain Mining company, operating some 100 miles north of Goldfield, had a bullion production during March of \$40,000, or the biggs month in the history of the mill owned by the company, and that covers a year. The total bullion production of this mill for the year, in the opinion of the management, will not full short of \$350,000. The corporation has paid \$128,000 in dividends, or 16 per cent \$128,000 in dividends, or 16 per cent

on par.

During the week Goldfield was visited by W. R. Alberger, general traffic manager of the Tonopah & Tidewater company, who was free to admit that one year from now Goldfield will be better than ever before in its history, not excluding the boom days, although there will not be the erazy, indiscrimthere will not be the crizy, maiscriminate speculation that was rife at that period. He says that from Las Vegas, Nev., to Ludlow, is an immense country with milling ore that has hardly been touched, and he looks for a tremendous amount of activity in that territory within a few months.

There is the and of the present week.

Towards the end of the present week, the main topic of conversation in local mining circles has been the probabilities of a big, permanent are body being opened up on the Great Bend estate, controlled by Loftus & Davis of Round Mountain fame. This claim has been controlled by Loftus & Davis of Round Mountain fame. This claim has been worked by lessees and on company account for a long time, and the result has not been as flattering as hoped for. However, at a depth of 300 feet, night before last, a round of shots broke into a body of ore said to be about two fut across, that will average close to \$120 to the ten. The permanency of this shoot is as yet undetermined, but should it hold out, it will mean a great deal for the "Bend" and for that section of Diamondfield just north of Gold-field. The Diadem lease on the Bend is sacking ore from time to time, but the permanent deposit is yet to be lothe permanent deposit is yet to be lo-

W. S. McCORNICK VISITS THE BLACK HOLE MINE

On his way home from the coast the first of the week, W. S. McCornick dropped off at Chafey for the purpose of taking a look at the Black Hole property. Mr. McCornick says that owners of properties everywhere place quite naturally an opthulstic atmosphere about them, but he found the Black Hole a bigger and letter mine than he had expected to find it. He is very much pleased with the condition of the property, and egrees with the minagement that a larger mill and tramway to the mill are needed to wring out the most economical results.

MARKET IS STEADIER

While there may be too many sore spots in the market for any very pronounced upward tendency for the time being, the business on the local exchange showed a stronger tendency yesterday after the great recession in several of the leaders during the past two weeks, it was noticeable on Wednerday that a few buying orders about the board served to stiffen the spines of several different issues. During the day a total of 157,456 shares of stock sold, representing a market value of \$100,864. The following were the closing unlisted and listed stock transactions:

ON LOCAL EXCHANGE PLENTY OF ORES IN THIS CAMP

Nevada-Victor Getting Ready to Ship Large Tonnage of High Grade.

MILL NOW TREATING

pleted.

Little is known in Salt Lake regarding the Nevada-Victor, the news here-tofore having gone mostly to Los Angeles and San Francisco, although the company is well known in the east, being one of the active New York curoissues. The company is operating the first unit of its mill, the present daily capacity being 100 tons, and units will be added from time to time as fast as

in number. The Nevada Victor company intends to list its stock on the Salt Lake exchange, also on the coast. This comp should attract the mining machinery and supply firms of Salt Lake (its.)

Nevadas in San Francisco.

James A. Pollock & Co., bankers and brokers, 6 West Second South, furnish the following San Francisco stock quota-tions, received over their private wire yesterday:

REPORT ISSUED ON INSPIRATION MINE

Henry Krumb Gives Some Idea of Importance of the Properties.

H. F. J. Knobloch, secretary of the Inspiration Copper company, has issued a statement giving data regarding this HUNDRED TONS DAILY organization that is timely in view of the activity of the stock both in the

geles and San Francisco, although the company is well known in the east, being one of the active New York curb issues. The company is operating the first unit of its mill, the present duily capacity being 100 tons, and units will be added from time to time as fast as possible until it will be capable of treating 600 tons of ore a day.

The development work consists of three tunnels, securing on the resources a vertical depth ranging from 180 to 570 feet. The resources have increased splendidly in size with depth, one vein being eighty feet on the lower levels copper.

splendidly in size with depth, one vein being eighty feet on the lower levels which was only two feet on the surface. The rock carries gold, silver and lead, and Mr. Spittal states that about the rowest assay one can get out of the ore is \$29.60 per ton. Of this milling grade of rock there are \$00.000 tons now available, so the need of a larger plant is apparent. In addition to this mill ore, as stated, the property has 25.000 tons of shipping ore, and it soon will be shipping at the rate of eight to ten cars a wick. The campany is treating ores from the Lucky Duthman, Double Standard and Nippine properties nearby.

In speaking of the camp itself, Mr. Spittall says that there were nine people in the district when his company started to work. Now the population numbers close to 500, and there are over a hundred prospects working, while of actually developed mines there are nine in number. The Nevada Victor company intends to list its stock on the Salt Lake exchange, also on the coast. This cemp should attract the mining machinery and supply firms of Salt Lake City.

Woodson tunnel, has struck the sulphide zone and developed ore averaging 2.10 per cent copper. In passing over the surface from the Miami to the Woodson tunnel and 2000 feet beyond, the mineral belt is seen to be continuous, and the surface indications on the Inspiration are the same, and fully as favorable as they are on the Miami.

favorable as they are on the Miami.

'In conclusion I may therefore say that with these favorable surface indications, together with the fact that sulphide ores of pay grade have already been developed in the Woodson tunnel, and the large body of ore developed by the Miami in its Red Rock shaft, all these facts make the Inspiration as unusually promising property. shaft, all these facts make the Inspira-tion an unusually promising property."
About 100 additional acres of valua-ble ground adjoining the above have been acquired by the company since Mr. Krumb made his report.
We also quote the conclusion of the report upon these properties, made by George A. Schroter, E. M., of Denver, Colo. dated February 4, 1909:
"The great showing in the Miami, and the present fine showing in the Inspiration itself, coupled with the ex-tensive surface indications, on unpros-

tensive surface indications, on unpros-pected portion of your claims, lead me to believe that the property is now of great value and has a brilliant future."

BULLION CAMP LOOKS LIKE ANOTHER BISBEE

LIKE ANOTHER BISBEE

A well known mining man on Wednesday gave the following statement to The Tribune relative to the Buillon mining district of Nevada:

"In a northerly discriter, 140 miles from the great Newhouse Cactus mine, lies Ely, a camp destined by virtue of its mineral to live forty or fifty years. Again north, just 160 miles, is Buillon, 'Old Buillen,' equally as rich in copper, once primitively worked and now actively animated owing to the interest shown by the 'Boston crowd."

"A second Bisbes will result from the combined efforts of big copper men, now on the ground with locators and engineers. As Newhouse and Ploche are the known southern base of the Ely apex. Tintic and Eureka the eastern, Rhyolite and Builfrog the sonthwestern, Lode and Illinois copper mines, near Fairview, the western, so is Buillon (twenty miles from Elko and twelve from Carlin) the northern base. With Ely as the wheel-imb, we then have radiating from it five spokes, each 100 miles in length, and each ending in world-famous copper deposits.

"Theorizing thus, we may conclude that the indications shown at the least developed terminals warrant calculating the output in future years as great as the sireaty developed terminals warrant calculating the output in future years as great as the sireaty developed terminals, if not greater, And, besides, in favor of buillon we have a country still farther north, richer in minerals than that country wouth of our southernmost proven camp.

"At Buillom, five ove dykes show clearant the largest smeller, and upon the advent of which the camp will no double develop into a second Bisbes.

"Two engineers of some note, yet unknown to each other, met in Elko six weeks ago, coming simultaneously from both coasts, and allhough neither communicated his intention, the action taken was almost identical. The result was a fine of much value to both and to the mining world, but to the one who suffered most from hardship there came the greatest reward. The ice and snow-covered mountain proved a hurdle worth

the smelting ores. Already the interest in this camp is widespread, although the big capital already in is keeping secret, as much al possible, as to the vastness of the deposits, until the snow has distappeared and they are enabled to gobble! more ground.

"June will see many new faces in Else and Carlin, and all ever the Bullion district. Elleo will profit most on account of the Western Pacific roalroad head-quarters and shops, and the new concerns coming in.

"Frank H. Hall, engineer and fartner in the largest group of claims, is now at Bullion preparatory to increasing his already busy working force. Ten then-sand dollars a month will be expended by his backets in the enterprise immediately work can be pushed to that extent. The wise ones say Bullion will soon be a feature on the Hoston curb. It is reported that a well known locator of mines, who of late has gained much distinction relative to the newest Newada camp, has quietly indersed the Bullion district, and Indications point to his engaging the attention of his backers into this old-new camp of Buillon, Ney."

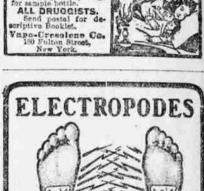

Mining Notes.

This being Arbor day, there will be no all on the local exchange. George H. Dern, general manager of the Consolidated Mercur company, came in from the camp Wednesday with good news for the local Boston-Sunshine stockholders. He states the mill is op-erating on 100 tans of ore a day, and it is doing excellent work.

Whooping-Cough, Croup, Coughs, Colds, Gatarrh, Bronchitis, Diphtheria. Cresolene is a Boon to Asthmatice.

Does it not seem more effective to breathe in a remedy for diseases of the breathing organe into to take the remedy into the atomsch? Careallene cures because the air, rendered strongly anticeptic, is carried over the diseased surface with every breath, giving prolonged and constant treatment. It is invaluable to mothers with small children. Be in postage
